

# 6 Signals of Digital Transformation

that show your company needs an innovation

01

## Many business processes are performed manually

You must manually download, upload and send PDF, Excel, CSV, or email and messages

02

## Corporate information systems are not integrated

Company personnel must copy and paste data from one system to another, or you have duplicate information in multiple applications

03

## Corporate applications are not in the cloud

Company doesn't take all the advantages from cloud systems, such as performances elasticity and scalability or greater data security, and it suffers from on-premises systems obsolescence

04

## You cannot accurately assess company performance

Performance indicators are not reliable, because activities tracking and analysis on company applications are partial and insufficient

05

## You would like to make more reliable business decisions

Your company has a data wealth to draw from, but has not been implemented an intelligent system to extract secure information, useful to choose in the best way

06

## Customers or personnel would like to access corporate services remotely

Customers would like to have a mobile app to use services remotely and on-field colleagues to access company applications at any time
