

# The solutions to the 6 Signals of Digital Transformation

to renew business processes and bring a transformation to your company

1

## Many business processes are performed manually

You need Business Process Automation applications, able to automate the execution of work processes and the integration between the various data sources

2

## Corporate information systems are not integrated

You need platforms that allow interoperability, can connect to multiple data sources, even non-standard ones, and make information available through a single user experience that has seamless solutions

3

## Corporate applications are not in the cloud

You need a cloud migration plan and environment-independent technologies that allow you a smooth transition without interrupting your services

4

## You cannot accurately assess company performance

You need to digitalize all the main functions of your company and use automated systems for data collection, such as BPM-based systems that can track business activities and calculate KPIs

5

## You would like to make more reliable business decisions

You need analytics that can synthesize the real information in your databases and artificial intelligence that can help you make consistent decisions by analyzing large amounts of data

6

## Customers or personnel would like to access corporate services remotely

You need platforms that enable mobility, integrate with existing systems and extend its functionality outside the company, making CRM, ERP, control panels and analysis dashboards available on smartphones and tablets

In all these steps you need to be fast, flexible and at same time safe: you need a low-code solution like WebRatio that allows you to address all the signals of Digital Transformation
